**Coronavirus 2019 Social Distancing and Infection Control at Sites - Risk Assessment**

**Hazard:** Coronavirus 2019 is a deadly disease that has resulted in a worldwide pandemic, and resulted in quarantine measures being implemented in many countries. All forms of working, up to 5 million people have been isolated, and over 325,000 people have died (20th May 2020). The UK government has given Covid Secure recommendations so that the risk assessment can continue.

This risk assessment is to explain the risks associated with working during this pandemic, and the controls that Solus has put in place for managing them. The control measures are presented in all areas of the sites, including toilets, canteens, vehicles, office work, working on vehicles in adjacent bays, nearby went, contacting patients, etc.

### Controls

**Electrical Exposure**
- At this time it is not possible to eliminate exposure possibility to coronavirus.

**Bacterial Exposure**
- Customers are prevented from coming to site unless absolutely necessary.
- Intensive Level is required to only that which directly meets the principles and purposes of the business.
- Temperature taking on site before come into site and are permitted to work.

**Isolation from Exposure**
- Where possible employees work from home rather than at a site.
- Where this is not possible employees may be foraged.
- Especially vulnerable staff are either working from home or shielded at home.
- Social Distancing rules in place at all sites, and where possible in all areas of the sites.
- Permits screen separating front and rear of chase vehicles.

**Social Distancing**
- Social Distancing blueprint document published; in place and adhered to by the sites.
- Hygiene procedures for open sites document published and in place.
- Social Distancing check sheet published and in place at each site. This document is completed before each site is reopened, and reviewed on a monthly basis.
- Covid Secure champions at each site to monitor compliance with social distancing rules.
- Social distancing signage throughout the site to reinforce the social distancing measures.
- Pedestrian one way systems in place where narrow corridors or stairways exist and where possible.
- 2 metre lines / markers in all places where people may queue or need to wait for someone else to move.
- Chairs or other barriers in place on entry / exit points where one person only is allowed - such as tyre bays, kitchens, stairs.
- Contents have restricted capacity, with ranking and where possible tables and chairs removed.
- Eating has been allowed in the workshop in the circumstances, but only on the proviso that employees wash their hands before eating, and only if there is no where else for them to go due to social distancing measures on the site.
- Tables and seating facilities have restricted capacity, and have not been used as a last option.
- Social Distancing signage up around the sites to reinforce the social distancing measures.

**Dissemination / Death**
- Occasional - Contract Covid19
- 10 Likely - High
